

JOSHUA AGYEKUM - TALENT DEVELOPMENT SPECIALIST

Oslo, Norway | [Email](#) | [Phone](#) | [LinkedIn](#) | [Portfolio](#)

Dear Hiring Manager,

As the energy industry evolves through data, analytics, and new technologies, the need for future-ready skills, strong leadership pipelines, and scalable talent processes has never been greater. I am excited to apply for the Talent Development Specialist role at TGS, where data-driven insight and people capability come together to shape the future of energy.

I bring over five years of experience owning and improving core talent development initiatives that support onboarding, role readiness, performance enablement, and leadership development across international organizations. In my current role as Learning and Development Partner, I design and deliver digital-first, scalable development solutions for sales and technical teams, partnering closely with business leaders to translate capability needs into practical, data-informed talent processes.

My work is grounded in a strong digital and analytical mindset. I have hands-on experience transforming development processes into intuitive, self-service experiences using LMS ecosystems and SCORM/xAPI standards, supported by clear KPIs and adoption metrics. By leveraging data and feedback, I continuously refine talent solutions to improve engagement, effectiveness, and workforce outcomes.

I am particularly motivated by roles that combine strategic thinking with hands-on execution. I thrive in end-to-end ownership, from discovery and design through implementation and adoption. I enjoy collaborating with HR stakeholders and leaders to embed talent practices that support long-term organizational capability.

With a Master's degree from NMBU, a Master's in Educational Technology, permanent Norwegian residency, and B1 Norwegian language certification, I am well positioned to contribute effectively in TGS's global yet locally grounded environment.

I would welcome the opportunity to bring my experience in talent development, digital enablement, and data-informed decision-making to TGS and support your continued growth across the evolving energy landscape.

Kind regards,
Joshua Agyekum
